Harmony Horizon Europe

HARMONY

Together We Create

HARMONIZED

Disaster Response

Across Borders

Funded by
the European Union

What is HARMONY About?

HARMONY develops harmonised, cross-border protocols for assessing and managing climate-related and geological risks. In HARMONY methods, tools, and data come together into one shared framework so countries can address hazards such as wildfires, floods, and earthquakes.

WHERE?

HARMONY is tested where collaboration matters most, in three Europe's cross-border regions:

Spain-Portugal

Greece-Bulgaria

Albania-North Macedonia

HOW?

TECHNOLOGICAL LAYER

Technology that connects regions and turns data into action

SOCIAL LAYER

Collaboration that brings local knowledge and expertise together

IMPACT LAYER

Building long-term resilience through learning and skills

WHY?

Disasters do not stop at national borders, but risk assessment and emergency procedures often do. HARMONY addresses this gap by supporting neighboring countries to develop their harmonised protocols for disaster management.
